Professional Summary

Software Engineer with 2+ years of experience building scalable applications, backend systems, and RESTful APIs. Experienced in developing reliable, high-performance solutions with a focus on system design, automation, testing, and performance optimization. Familiar with cloud technologies, AI-assisted development, CI/CD pipelines, and distributed systems.

Work Experience

CloudLead Technologies Pvt Ltd

Pune, Maharashtra, India

January 2024 – Present

Lead Software Developer

June 2026 – Present

- Lead end-to-end engineering and technical planning for CloudLead's B2B data intelligence platform, converting product requirements into scalable architecture, implementation plans, and production releases.
- Design REST APIs, third-party integrations, database schemas, application workflows, and microservice interactions with a focus on maintainability, security, performance, and future growth.
- Drive system design discussions and technical roadmap decisions for new features, balancing delivery priorities with long-term maintainability and scalability.
- Review code, establish engineering practices, guide developers, and coordinate with product and business stakeholders throughout planning, development, testing, and delivery.
- Oversee deployment readiness, production monitoring, root-cause analysis, and performance improvements to maintain reliable services and stable releases.

Software Developer

January 2025 – May 2026

- Engineered and maintained Node.js and Express.js backend services, microservices, REST APIs, and reusable modules supporting enterprise workflows and data-intensive web applications.
- Optimized data models, indexes, and query strategies across MongoDB, PostgreSQL, and MySQL to improve data access, application responsiveness, and processing reliability.
- Implemented secure backend logic, service integrations, validation, and error handling while preserving data integrity across APIs and connected systems.
- Partnered with frontend and product teams to integrate React features, translate business requirements into technical solutions, and resolve application issues across the stack.
- Diagnosed production defects through monitoring and root-cause analysis, expanded unit, integration, and API test coverage, and supported Git, Docker, Linux, and CI/CD release workflows.

Python Developer

January 2024 – December 2024

- Built Python-based web-scraping and data-extraction workflows for multiple platforms, structuring large outputs for storage, processing, and downstream analysis in MongoDB.
- Managed and analyzed large datasets in MongoDB to support data-processing and reporting requirements.
- Applied advanced Excel techniques to organize extracted data and prepare operational reports.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, Java, C++

Backend Development: Node.js, Express.js, Spring, Spring Boot, REST APIs, Microservices

Frontend Development: React.js, HTML5, CSS3

Databases and Search: MongoDB, PostgreSQL, MySQL, SQL, Elasticsearch

Data and Automation: Web Scraping, Data Extraction, Data Processing, Aggregation Pipelines, Advanced Excel, Pivot Tables

Cloud and DevOps: AWS (Basic), Docker, Linux, CI/CD Pipelines

Testing and Tools: Unit Testing, Integration Testing, API Testing, Git, GitHub, Postman

Core Concepts: Data Structures, Algorithms, Object-Oriented Programming, Design Patterns, System Design, Debugging, Performance Optimization

Projects

Mongo Explorer – Large-Scale Data Analytics Platform

Technologies: Node.js, Express.js, React, MongoDB, Elasticsearch, Docker

- Built a scalable data exploration and analytics platform for MongoDB collections ranging from thousands to more than 40 million records.
- Implemented optimized pagination and fast-loading views, reducing initial load time by up to 50% and enabling smooth navigation across high-volume collections.
- Created multithreaded parallel processing for live counting and aggregation, improving performance by 60% with progress tracking and cancellation controls.
- Designed advanced pivot tables with multi-dimensional grouping and merged pivots, maintaining 100% accuracy across generated results.
- Integrated Elasticsearch through Docker as a high-performance search layer alongside MongoDB, reducing complex query and aggregation times from minutes to seconds.
- Added AI-assisted workflows for data exploration, query generation, and analysis across large datasets.

Visitor Management System – Secure Access and Attendance Platform

Technologies: Node.js, Express.js, React, MongoDB, REST APIs

- Designed and developed a secure visitor and employee management platform for entry, exit, attendance, and auditable access workflows.
- Implemented QR-based access with state validation for check-in, check-out, overtime, and invalid or repeated scans.
- Protected sensitive identity and credential data with field-level encryption while preserving reporting functionality and operational performance.
- Built an automated attendance lifecycle for daily closures, overtime classification, missed-exit handling, and system-driven record finalization.
- Delivered a React administrative dashboard with real-time status views, searchable logs, and paginated reports backed by optimized backend services.

Education

Bachelor of Engineering in Computer Engineering

Marathwada Mitra Mandal's Institute of Technology, Lohegaon, Pune
Pune, Maharashtra, India

August 2019 – July 2023

CGPA: 7.48

Certifications and Achievements

- Java from Basics to Advanced – Udemy; Full Stack Java Development – Simplilearn
- SQL from Basics to Advanced – Udemy; Developer Job Simulation – Accenture Nordics
- HackerRank: Java Gold Badge and 5-star rating
